

The first draft is a strong starting point. The website is clean, organized, easy to navigate, and visually consistent with the new Mustang Insulation Services branding. The black, white, and red color palette works well, the new logo is incorporated consistently, and the overall structure already supports both residential and commercial customers.

4. Important Content Corrections Before Launch

These items should be corrected before the website goes live on mustanginsulation.com.

Previous Ownership References

Any references to the former owner need to be removed or rewritten.

The site should represent Mustang under its current ownership and current direction.

The About page should focus on:

- Mustang Insulation Services today
- Local ownership
- Professionalism
- Quality workmanship
- Residential and commercial expertise
- Modern customer experience
- Long-term company vision

The site should not unintentionally make visitors believe that the previous owner still owns or operates the business. Lets not make mentions of “Matt” or ownership in general outside of Family owned or Locally owned and operated

5. Remove Unsupported “#1” Claims

Avoid language such as:

“The #1 insulation company in North Texas.”

Better language would include:

Insulation Engineered for Better-Performing Spaces

or

Smarter Insulation. Better Performance.

or

Building Better Spaces Across DFW (My favorite)

The website should feel confident without relying on exaggerated marketing language.

6. Revise “No Subs, Ever”

The website currently uses “No Subs” as a major trust signal.

Absolute language such as:

No Subs, Ever

Let’s change that to

Core Insulation Work Performed by Mustang Teams

or

Professional Installation by Experienced Crews

7. Clarify Warranty Language

The current site prominently references a **Lifetime Warranty**.

The website should distinguish between:

- Manufacturer warranties
- Product warranties
- Mustang workmanship warranties
- Service-specific warranties

Suggested wording:

Industry-Leading Product & Workmanship Warranties

Then the relevant service pages can explain the specific warranty associated with each system.

8. Revise the R-Value Guidance Module

The current Residential page includes an **R-41 / 14-inch attic guidance module**.

This section should be revised so that it does not imply one insulation depth, or R-value is universally appropriate for every home.

A better presentation would be:

Common Attic Upgrade Levels

Show several common R-value targets (R-38/R-44/R-49/R-60) and corresponding approximate insulation depths, then add:

Final recommendations depend on the existing insulation, attic configuration, product being installed, local code requirements, and the condition of the home. Mustang evaluates each attic before recommending a system.

This keeps the educational value without oversimplifying the recommendation.

9. Reviews and Testimonials

The current website walkthrough states that four paraphrased testimonials are included with city and source attribution.

I would prefer that testimonials presented as customer quotes use actual customer language rather than rewritten or paraphrased language.

If a review needs to be shortened, excerpts can be used while preserving the customer's actual wording.

The dedicated Reviews page also needs to be checked carefully to ensure the reviews actually render correctly.

Review presentation should include, where available:

- Customer first name
- City
- Star rating
- Review platform
- Actual review excerpt

Examples:

★★★★★

“Mustang showed up on time, explained everything clearly, and left the attic cleaner than they found it.”

— John, Arlington

Google Review

Real customer feedback will be much more powerful than generic testimonial copy.

10. Creative Direction: More Premium and Modern

The biggest creative change I would like to see is a more cinematic and premium visual experience.

The current website is professional, but it still feels similar to a well-designed contractor website.

The new Mustang brand should feel more distinctive.

The inspiration is closer to:

- Modern automotive websites
- Technology companies

- Premium energy companies
- High-end building-performance brands
- Modern architecture firms

The site should use:

- Large typography
- Full-width imagery
- Strong negative space
- Minimal visual clutter
- Subtle animation
- Smooth transitions
- Dark sections
- High-quality project photography
- Dramatic close-up visuals
- Small, intentional red accents

Avoid excessive icons, decorative graphics, gradients, or construction-industry clichés.

11. Homepage Hero Recommendation

The homepage should immediately establish the new Mustang positioning.

Instead of a conventional contractor hero, consider a full-screen cinematic hero.

Possible headline directions:

Option A

SMARTER INSULATION.

BETTER-PERFORMING SPACES.

Residential and commercial insulation solutions engineered for comfort, efficiency, and long-term building performance.

GET AN ESTIMATE

Option B

INSULATION.

ENGINEERED.

High-performance insulation solutions for homes, businesses, and commercial buildings across Dallas-Fort Worth.

Option C

BETTER PERFORMANCE STARTS WITH THE ENVELOPE.

Insulation, air sealing, spray foam, and building-envelope solutions designed to improve comfort and efficiency.

The hero should immediately communicate that Mustang is a serious, modern company.

12. Homepage Visual Concept

Ideally, the homepage would use professional video or cinematic photography.

Potential imagery:

- Mustang-branded satin-black vehicle arriving at a project
- Technician entering an attic
- Blown-in insulation installation
- Spray foam application
- Commercial insulation installation
- Thermal camera imagery
- Clean finished attic
- Insulation removal
- Commercial pin-weld installation
- Branded employee uniforms
- Close-ups of equipment
- Completed commercial projects

These visuals should feel intentional and premium.

Avoid relying heavily on generic stock photography.

The website should visually prove that Mustang is a real operating company.

13. Animation & Motion

The site should feel modern without becoming gimmicky.

Good motion could include:

- Subtle text reveals
- Smooth section transitions
- Images slowly scaling as the visitor scrolls
- Controlled parallax effects
- Service panels changing on hover
- Statistics counting upward
- Images revealing through masks
- Subtle background movement
- Smooth page transitions

Avoid:

- Constant movement
- Spinning icons
- Excessive bouncing elements
- Long loading screens
- Overly dramatic animations
- Anything that slows the mobile experience

The website should feel expensive and controlled.

14. Mustang Brand Statement Section

I would like one section on the homepage that strongly communicates the company's identity.

Example:

NOT YOUR TYPICAL INSULATION COMPANY.

Better processes.

Better communication.

Better workmanship.

Better-performing spaces.

Mustang combines experienced installation crews, modern tools, and straightforward recommendations to deliver insulation systems designed around the building—not simply the lowest-cost solution.

This section could use a large Mustang logo mark in the background at low opacity.

15. Service Presentation

The current draft lists all twelve services.

I would not necessarily display twelve equal service cards on the homepage.

That can make the site feel cluttered.

Instead, feature the major categories prominently.

For example:

01

ATTIC INSULATION

Blown-in insulation and attic upgrades designed to improve comfort and reduce unwanted heat transfer.

02

SPRAY FOAM

Open-cell and closed-cell insulation systems for residential, commercial, and metal-building applications.

03

COMMERCIAL INSULATION

Insulation solutions for tenant improvements, warehouses, retail, metal buildings, and new construction.

04

INSULATION REMOVAL

Professional removal and replacement of damaged, contaminated, or outdated attic insulation.

05

BUILDING PERFORMANCE

Air sealing, radiant barriers, attic ventilation solutions, and other measures designed to improve building performance.

Then include:

VIEW ALL SERVICES

The full Services page can show the complete offering.

16. Critical SEO Change: Individual Service Pages

This is one of the most important changes to make before launch.

The current Services page contains the services primarily as sections on one page.

For SEO, the major services should have dedicated URLs and dedicated pages.

Recommended structure:

mustanginsulation.com/attic-insulation/

mustanginsulation.com/blown-in-insulation/

mustanginsulation.com/spray-foam-insulation/

mustanginsulation.com/open-cell-spray-foam/

mustanginsulation.com/closed-cell-spray-foam/

mustanginsulation.com/insulation-removal/

mustanginsulation.com/air-sealing/

mustanginsulation.com/radiant-barrier/

mustanginsulation.com/commercial-insulation/

mustanginsulation.com/metal-building-insulation/

mustanginsulation.com/soundproofing-insulation/

mustanginsulation.com/rodent-exclusion/

The main:

mustanginsulation.com/services/

page should function as a service hub linking visitors to the individual pages.

17. Each Service Page Should Include

Each major service page should have enough useful content to stand on its own.

Recommended structure:

Hero

Service name + strong image + CTA.

What the service is

Simple explanation for the customer.

When it makes sense

Common situations where the service is recommended.

Mustang's approach

Explain how Mustang evaluates and installs the system.

Available options

Products, R-values, systems, etc.

Benefits

Comfort, energy efficiency, moisture control, sound control, or other applicable benefits.

Project photos

Real Mustang projects.

FAQs

Answer common customer questions.

Service area

Dallas-Fort Worth and relevant surrounding areas.

CTA

Request an estimate.

This will help customers and search engines understand each service.

18. Commercial Section

Commercial insulation should receive more prominence.

Mustang performs work beyond residential attic projects.

The website needs to communicate capabilities for:

- Commercial tenant improvements
- Warehouses
- Metal buildings
- Retail
- New construction
- Pin-weld insulation systems
- Spray foam
- Batt insulation
- VRR systems
- Intumescent coatings
- Specialty insulation applications

A GC visiting the site should immediately feel comfortable inviting Mustang to bid a commercial project.

Consider a dedicated:

Commercial Insulation

navigation item.

Then create commercial project case studies over time.

19. Residential Positioning

Residential content should focus on outcomes homeowners understand.

Examples:

- Hot upstairs rooms
- Uneven temperatures
- High energy bills
- Old or compressed insulation
- Contaminated attic insulation
- Drafts
- Insufficient attic R-value
- Home renovation projects
- Spray foam attic conversions

Rather than primarily talking about insulation products, explain the homeowner problem first.

Example:

Your attic may be costing you comfort.

Insufficient or poorly installed insulation can allow unwanted heat transfer, contribute to uneven indoor temperatures, and force HVAC equipment to work harder.

Then explain Mustang's solution.

20. Project Gallery → Case Studies

The gallery should evolve beyond a simple photo gallery.

Create short project case studies.

Example:

Arlington Attic Upgrade

Problem:

Homeowner had approximately 4–6 inches of existing insulation and significant summer heat transfer.

Solution:

Mustang evaluated the attic, completed necessary preparation, and installed blown-in fiberglass to the recommended final depth.

Result:

Improved attic coverage and more consistent insulation throughout the home.

Then show:

- Before photo
- Installation photo
- After photo

For commercial work:

Grapevine Commercial Insulation Project

Project Type: Tenant Improvement

Scope: R-30 ceiling system and wall insulation

Solution: Pin-weld insulation system

Project Area: approximately XX,XXX square feet

These pages create tremendous credibility.

They also become valuable SEO content.

21. Photography Standards

Future website photography should follow a consistent visual style.

Priority should be given to:

- Real Mustang employees
- Branded uniforms
- Branded vehicles
- Clean equipment
- Real installations
- Completed projects
- Wide environmental shots
- Detailed close-ups

Avoid messy jobsite photos unless they are specifically being used as “before” photos.

A premium brand requires premium photography.

22. Typography

Continue using the typography system from the new brand guidelines.

Recommended:

Headlines: Space Grotesk Bold

Body: IBM Plex Sans

Headlines should often be oversized and confident.

Short headlines are preferable to long paragraphs in high-impact sections.

Example:

BUILT FOR PERFORMANCE.

rather than:

We provide high-quality insulation solutions for residential and commercial properties.

23. Color Usage

Continue using:

Black: #0D0D0D

White: #FFFFFF

Mustang Red: #C8102E

Gray: #6B6B6B

Red should remain an accent.

The website should primarily feel black, white, charcoal, and architectural.

Use red for:

- CTA buttons
- Small lines
- Hover states
- Important numbers
- Accent copy
- Select icons

Avoid large areas of bright red.

24. Calls to Action

Primary CTA:

GET AN ESTIMATE

Secondary CTA:

CALL MUSTANG

or

TALK TO AN INSULATION SPECIALIST

Avoid rotating between too many CTA phrases.

Consistency improves clarity.

25. Quote Form Improvements

The current form already captures useful information.

Consider adding:

Property Type

- Residential
- Commercial
- New Construction
- Not Sure

Project Type

Existing service dropdown.

Approximate Square Footage

Optional.

Upload Photos

Allow customers to upload attic/project photos.

Preferred Contact Method

- Call
- Text
- Email

Project Timeline

- ASAP
- Within 30 Days
- 1–3 Months
- Planning / Researching

This would improve lead qualification.

26. Local SEO Structure

Mustang should clearly establish Dallas-Fort Worth as its primary market.

The website should mention the DFW service area naturally throughout the site.

Create a main:

Service Areas

page.

Then, over time, develop useful city pages for priority markets.

Potential cities:

- Dallas
- Fort Worth
- Arlington
- Grand Prairie
- Mansfield
- Grapevine
- Colleyville
- Hurst
- Euless
- Bedford
- North Richland Hills
- Southlake
- Forney
- Rockwall
- Other target areas

Do not create dozens of identical pages where only the city name changes.

Each location page should eventually contain:

- Local project examples
- Photos
- Testimonials
- Local service information
- Relevant building types
- Frequently requested services

27. Technical SEO Requirements Before Launch

Please ensure the production website includes the following.

Unique Page Titles

Every important page should have a unique SEO title.

Example:

Spray Foam Insulation Dallas-Fort Worth | Mustang Insulation

Unique Meta Descriptions

Every major page should have its own description.

Proper Heading Structure

Each page should use:

- One primary H1
- Logical H2s
- Logical H3s

XML Sitemap

The website should automatically generate a sitemap.

Google Search Console

Mustang should own the Search Console account.

The developer can be added as a user.

Google Analytics

Install GA4 or the appropriate analytics solution.

LocalBusiness Schema

Implement structured data identifying Mustang Insulation Services as a local insulation contractor.

Canonical URLs

The production domain should consistently use:

<https://mustanginsulation.com/>

or the selected www version.

Image Optimization

Images should use modern compressed formats where possible.

Avoid extremely large image files.

Alt Text

Important images should include relevant descriptive alt text.

Mobile Performance

Mobile performance should be prioritized.

Core Web Vitals

Animations and videos should not significantly hurt loading performance.

Indexing

The development/staging site can remain blocked from indexing.

Once mustanginsulation.com goes live, make sure:

- noindex tags are removed
- robots settings allow crawling
- the sitemap is submitted
- important pages are indexable

28. Domain Migration / Redirects

Before launch, determine whether any previous Mustang website URLs existed.

If there were old pages that received traffic or backlinks, preserve their value.

Old URLs should be permanently redirected to the closest corresponding new page.

Do not simply delete every old URL.

29. Mobile Experience

The mobile website should receive the same design attention as desktop.

Important elements:

- Large readable text
- Easy tap targets
- Sticky phone or estimate CTA
- Fast loading
- No oversized animations
- Easy quote form
- Clear service navigation
- Project photos sized properly
- Minimal menu clutter

A large percentage of residential prospects will likely first encounter Mustang from their phone.

30. Suggested Homepage Structure

Recommended flow:

1. Hero

Strong cinematic image/video.

Headline:

SMARTER INSULATION. BETTER-PERFORMING SPACES.

CTA:

GET AN ESTIMATE

2. Trust Strip

Examples:

Locally Owned

Residential + Commercial

Professional Installation

Free Estimates

3. Brand Statement

NOT YOUR TYPICAL INSULATION COMPANY.

Short copy about modern processes, professionalism, communication, and building performance.

4. Featured Services

Large visual service modules.

- Attic Insulation
- Spray Foam
- Insulation Removal
- Commercial Insulation
- Building Performance

5. Residential / Commercial Split

Large imagery.

FOR YOUR HOME

FOR YOUR BUSINESS

6. Building Performance Section

Explain the Mustang approach.

Possible headline:

THE RIGHT INSULATION SYSTEM STARTS WITH THE BUILDING.

7. Featured Project

Use a real project with several photos.

8. Why Mustang

Examples:

- Professional Crews
- Clear Recommendations

- Modern Tools
- Quality Materials
- Strong Communication
- Residential + Commercial Experience

9. Process

INSPECT

RECOMMEND

INSTALL

STAND BEHIND THE WORK

10. Reviews

Real customer reviews.

11. Service Area

DFW map or tasteful city listing.

12. Final CTA

Large black section.

READY FOR A BETTER-PERFORMING SPACE?

GET AN ESTIMATE →

31. Navigation Recommendation

Keep the navigation simple.

Suggested structure:

Home

Residential

Commercial

Services

Projects

About

Contact

GET AN ESTIMATE

Services can use a dropdown.

Avoid putting every possible service directly into the primary navigation.

32. Footer Recommendation

Footer should include:

Mustang

Logo

Short company description

Services

Attic Insulation

Spray Foam

Insulation Removal

Commercial Insulation

Air Sealing

Radiant Barrier

Company

About

Projects

Reviews

Contact

Service Areas

Dallas

Fort Worth

Arlington

Grand Prairie

Mansfield

Other DFW Areas

Contact

Phone

Email

Add links to:

Privacy Policy

Terms if applicable

33. Priority Levels

PRIORITY 1 — Must Be Fixed Before Launch

- Remove previous-owner references
- Remove unsupported #1 claims
- Clarify “No Subs” wording
- Clarify warranty wording
- Review R-value claims
- Fix Reviews page
- Use authentic testimonials
- Build individual service pages
- Configure SEO metadata
- Configure sitemap
- Configure schema
- Configure Search Console
- Confirm proper indexing settings
- Optimize mobile performance
- Verify all contact information
- Connect production domain properly

34. PRIORITY 2 — Strongly Recommended Before or Shortly After Launch

- Modernize homepage design
- Introduce more cinematic imagery
- Improve service presentation
- Expand Commercial page
- Build case studies
- Improve gallery
- Add project photo upload to quote form
- Create priority service-area pages
- Improve copywriting around building performance
- Add stronger brand storytelling

35. PRIORITY 3 — Future Enhancements

- Professional brand video
- Thermal imaging content
- Before-and-after project sliders
- Detailed project case-study library
- Educational blog/resources
- Energy-efficiency guides
- Interactive insulation calculator
- Interactive service-area map
- More sophisticated scroll animation
- Video testimonials
- Commercial project portfolio

36. Overall Creative Goal

The goal is not to make the website busier.

The goal is to make it feel more intentional.

Mustang should appear:

Modern without looking like a software company.

Premium without appearing overpriced or inaccessible.

Technical without confusing homeowners.

Construction-capable without looking like a traditional contractor.

Commercially credible without alienating residential clients.

The visual identity is already moving strongly in this direction.

The website should now match the quality of the new logo, uniforms, vehicles, and overall rebrand.

The visitor should leave with the impression:

“This is a serious company. They know what they're doing, they're modern, and they're probably going to communicate better than the average contractor.”

37. Final Requested Direction for Revision

For the second website draft, I would like to focus on four areas:

1. Correct the content

Remove outdated ownership information and tighten any claims relating to warranties, subcontractors, R-values, rankings, and testimonials.

2. Upgrade the visual experience

Make the website more cinematic, premium, minimal, and technology-forward.

3. Improve the SEO architecture

Create individual pages for important services and ensure the site is technically prepared for search before launch.

4. Strengthen Mustang's positioning

Present Mustang as a modern residential and commercial **building-performance and insulation company**, rather than simply another insulation contractor.

The first draft has a strong foundation. I would rather refine that foundation than completely redesign the website from scratch.

The next iteration should primarily focus on making the brand feel more distinctive, premium, credible, and future-facing.
